Effective drifts and diffusions for large-scale variability patterns

D.T. Crommelin and E. Vanden-Eijnden

Courant Institute of Mathematical Sciences, New York University (crommelin@cims.nyu.edu)

A new technique for the estimation of drifts and diffusions from timeseries makes use of the information about the eigenspectrum of the stochastic process assumed to underlie the data. We apply this technique to the analysis of timeseries of large-scale atmospheric variability patterns.
