Environmental, sea and coast problems are accepted as the third social matter by the political community after having thought of security and economics with the globalization procedure; states as accomplished with the public management have started to leave the authorities to international associations about saving environmental values. Until the 1970's; international associations haven't attracted importance to environmental matters. With the increasing sea and coastal problems besides environmental ones; International Associations have tried to examine and control. In that sense, such as International Finance Institutions World Bank, European Investment Bank, IMF, World Trade Center etc. . . have supported many projects financially regarding coastal zone management. This bulletin will include how the financial institutions manage the money and their effort and what they are arranging to protect sea, coastal and environmental values.
